Mixer Automatic Wash Out System

AUTOMATIC WASHOUT SYSTEM

SPRAY NOZZLE MOTOR

SPRAY WAND

The automatic power wash out system vastly reduces the amount of cleanup time required to remove the build-up of flyash or other sticky materials which might be used in a mixer.

The system features an automatic spray-clean cycle which makes it easier and safer to clean the inside of the mixer. It includes a control package with motor starters for the high pressure pump and individual spray nozzle motors.

The wash out system consists of internally mounted rotary spray nozzles with an oscillating pattern which directs the high pressure water spray to the critical areas inside the mixer.

A hand-held pressure wand is used to clean hard to get to spots for a final cleanup. It can also be used for other clean-up jobs in the area.

The automatic power wash out system is available on any mixer size of the four types of mixers offered by Mixer Systems; the horizontal single shaft, twin shaft, planetary and Turbin pan type mixers.
